1- TECHNICAL FEATURES

The XR9 Spot is fitted with a Philips MSR 575/2 discharge lamp (GX9,5 lampholder base), with a colour temperature of 7,200 °K and a luminous flux of 49,000 Lumens.

Duration is 750 hours, with replacement recommended before 1000 hours

Other recommended lamps: Philips MSD 575 (GX9,5- 6000°K- 43.000 lm- 3000 hours)

The unit incorporates:

Motorized Focus system

Zoom (3 selectable beam aperture angles 11° / 15° / 18° with auto-focus)

Dimmer (emitted light is controlled by progressive and linear dimming).

Shutter (instantaneous shutter opening/closure)

Strobe: mechanical strobe effect (frequency variable from 0.85 flashes/sec to 10 flashes/sec).

2 gobo wheels: 1 rotating (7 indexable 16 bit gobos + open) and 1 fixed (11 gobos)

2 Colour wheels (16 colours)

Prism(indexable 3 facet prism rotating in both directions)

2 Frost Filter

Electronic or magnetic ballast

Pan: 540° in 3.9 seconds (8 or 16 bit) with auto repositioning system

Tilt: 320° in 2.6 seconds (8 or 16 bit) with auto repositioning system

USITT Standard DMX 512 input

26 DMX channels

4 -eight digit- LED display with 4 buttons

2 XLR connectors (In and Out) with 3 and 5 pins selectable by user

Power supply

Electronic ballast:

Universal power supply 90 - 245 V (50/60 Hz)

Electromagnetic ballast:

230 V 50-60 Hz(Standard)

On request: 100 V 50-60 Hz /120 V 60 HZ / 208 V 60 Hz

Power consumption: 750 W.

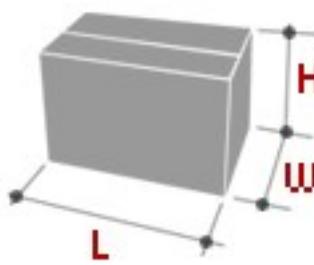

Remote Lamp on/off via DMX

Operating ambient temperature -10° / 40°

Weight

28 Kg (XR9 SPOT E.B.)

Dimensions (LxWxH)
projector (450x470x670mm)

Packaging Dimensions
(LxWxH)
550 x 440 x 800 mm
Weight
35.3 Kg

2- IMPORTANT SAFETY INFORMATION

2.1 Fire prevention:

XR9 uses a Philips 575 MSR/2 or MSD
The use of any other alternative lamp is not recommended and will null and void the fixture's warranty.
-Never locate the fixture on any flammable surface.
-Minimum distance from flammable materials: 1 MT.
-Minimum distance from the closest illuminable surface: 2 MT.
-Replace any blown or damaged fuses only with those of identical value. Refer to the wiring diagram if there is any doubt.
-Connect the projector to mains power via a thermal magnetic circuit breaker.

2.2 Prevention of electric shock:

-High voltage is present inside the unit. Unplug the unit prior to performing any function which involves touching the inside of the moving head, including lamp replacement.
-The level of technology inherent in the XR9 requires the assistance of specialised personnel for all servicing. Please refer to an authorised DTS service centre.
-A good earth connection is essential for proper functioning of the projector.
-Never connect the unit without proper earth connection.
-The fixture should be located in places with a good air ventilation.

2.3 Protection against ultraviolet radiation:

-Never turn on the lamp if any of the lenses, filters or ABS covering is damaged. Their respective shielding functions will only operate efficiently if they are in perfect working order.
-Never look directly at the lamp when it is on.

2.4 Safety:

-The projector should always be installed with bolts, clamps and other tools that are capable of supporting the weight of the unit.
-Always use a second safety cable to sustain the weight of the unit in case of the failure of the main fixing point.
-The external surface of the unit, at various points, may exceed 70°C. Never handle the unit until at least 10 minutes have elapsed since the lamp was turned off.
-Always replace the lamp if any physical damage is evident.
-Never install the fixture in an enclosed area lacking sufficient air flow. The ambient temperature should not exceed 40°C.
-A hot lamp may explode, so always wait for at least 10 minutes prior to attempting to replace the lamp.
-Always wear suitable hand protection when handling the lamp.

2.5 Level of protection against the penetration of solid and liquid objects:

-The projector is classified as an ordinary appliance and its protection level against the penetration of solid and liquid objects is IP 20.

3- MOUNTING THE LAMPS

Warning: Switch off the unit before replacing the lamp.

Philips 575 MSR/2

Power 575W

Luminous flux 49,000 lm

Colour temperature 7.200°K

Lampbase GX9,5

Rated life 1,000 hours

Philips 575 MSD

Power 575W

Luminous flux 43,000 lm

Colour temperature 6.000°K

Lampbase GX9,5

Rated life 3,000 hours

1) Using a screwdriver, remove the 3 screws A,B, C, (photo 1) which fix the lamp holder.

Photo 1

Photo 2

Photo 3

Photo 4

2) Remove the lamp holder assembly (photo2).

3) Insert the lamp (photo 3).

The lamp used on XR 9 is made in quartz glass and should be handled with care. Always follow the instructions supplied in the lamp's packaging. Never touch the glass directly but use the tissue provided in the lamp's packaging. The GX9,5 lamp socket is symmetrical.

DO NOT USE UNDUE FORCE ON THE GLASS. In case of difficulty, read again the instructions and repeat the procedure.

4) Replace the lamp assembly and tighten the screws A,B,C, which were previously removed (photo4).

3.1 Lamp alignment

Attention: we recommend to align the lamp in the optical system to avoid overheating of the dichroic filters and other components inside the unit.

Photo 5

Alignment is carried out using the 3 adjusters X, Y and Z.

During this operation you must have a uniform luminosity all around the projected area.

4- VOLTAGE AND FREQUENCY

The XR9 with electronic ballast can operate at 90-245 VOLT 50 or 60 Hz.

The XR9 with electromagnetic ballast can operate at 230 VOLT 50 or 60 Hz (Standard).

On request: 100 V 50-60 Hz /120 V 60 HZ / 208 V 60 Hz

5- INSTALLATION

XR9 may be either floor or ceiling mounted.

For floor mounting installations, the XR9 is supplied with four rubber mounting feet on the base.

For ceiling mounted installations, we recommend the use of appropriate clamps to fix the unit to the mounting surface.

The supporting structure from which the unit is hung should be capable of bearing the weight of the unit, as should any clamps used to hang it. The structure should also be sufficiently rigid so as not to move or shake whilst the XR9 is moving.

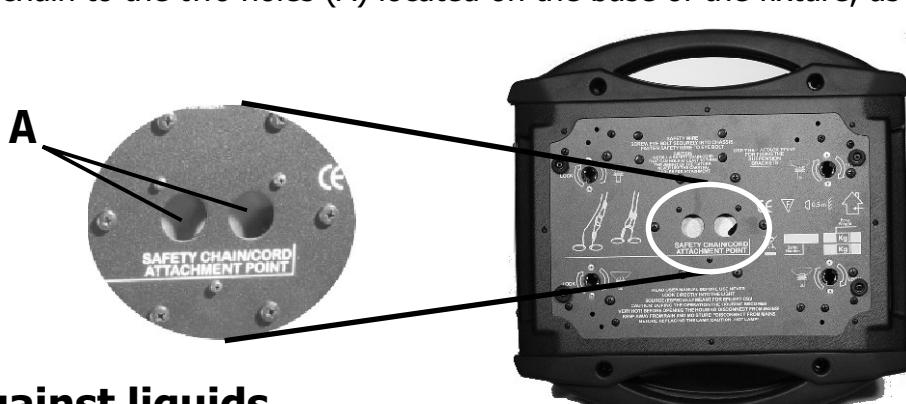

Four quarter turn fast locks placed on the base of the units, allows by using the two fast lock C clamps provided in the box, to fix the unit in any position.

5.1- Safety cable

We recommend the use of a safety cable or chain connected to the Xr9 and to the suspension truss in order to avoid the fixture accidentally falling should the main fixing point fail. Make sure that the iron cable or chain can bear the weight of the entire unit.

You may attach the safety chain to the two holes (A) located on the base of the fixture, as shown in the picture below.

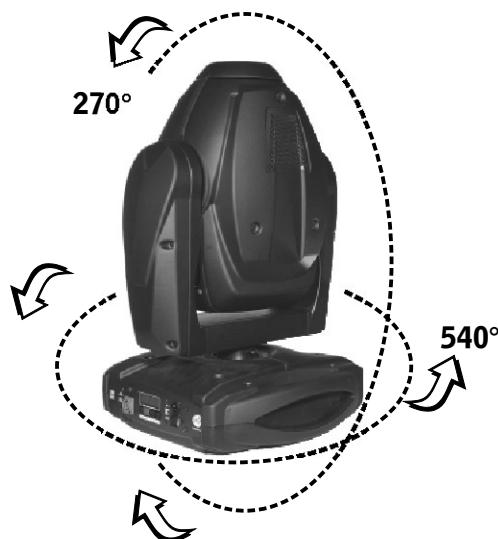

5.2- Protection against liquids

The projector contains electric and electronic components which should under no circumstances come into contact with oil, water or any other liquid. The proper unit functioning would be compromised should this occur.

5.3- Movement

The projector has a maximum movement of 540° for Pan and 270° for Tilt. DO NOT place any obstructions in the path of the projector's movement.

5.4- Risk of fire

Each fixture produces heat and must be installed in a well-ventilated place. The minimum recommended distance from flammable material is 1 MT.

Minimum distance from the object being illuminated is 2 MT.

5.5- Forced ventilation

You will note, on inspection, that the unit features various air inlets and cooling fans located on both the base and head of the fixture. These should, under no circumstances, be blocked or obstructed whilst the projector is in operation.

Doing so could cause the fixture to seriously overheat thereby compromising its proper operation.

5.6- Ambient temperature

The projector should never be installed in places that lack a constant air flow. The ambient temperature should NOT exceed 40°C.

6- MAINS CONNECTION

XR9 with electronic ballast operate at 90-245 VOLT 50-60 Hz.

XR9 with electromagnetic ballast operate at 230 VOLT 50-60 Hz

(On request: 100 V 50-60 Hz / 120 V 60 Hz / 208 V 60 Hz)

Prior to connecting the unit to your mains supply, ensure that the model in your possession correctly matches the mains supply available. For connection purposes, ensure that your plug is capable of supporting 6,3 amps at 230V, Or 16 amps at 100-120 V

Strict adherence to regulatory norms is strongly recommended.

Electronic ballast
90-245V 50 / 60Hz
Electromagnetic ballast
230 V 50/60 Hz (standard)
On request: 100 V 50-60 Hz
120 V 60 Hz / 208 V 60 Hz

6.1- Protection

The use of a thermal magnetic circuit breaker is recommended for each XR9.

A good earth connection is essential for the correct operation of the projector.

7- DMX SIGNAL CONNECTION

The unit operates using the digital DMX 512 (1990) signal. Connection between the mixer and the projector or between projectors must be carried out using a two pair screened ø 0.5 mm cable and a CANNON XLR 5 or 3 pins connector.

Ensure that the conductors do not touch each other. Do not connect the cable ground to the XLR chassis. The plug housing must be isolated. Connect the mixer signal to the DMX IN projector plug and connect it to the next projector by connecting the DMX OUT plug on the first projector to the DMX IN plug of the second one.

In this way, all the projectors are cascade connected.

NB. If the display showing the DMX address flashes, then one of the following errors has occurred:

- DMX signal not present
- DMX address not valid
- DMX reception problem

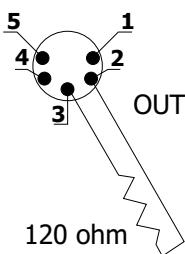

For installations where long distance DMX cable connections are needed, we suggest to use a DMX terminator.

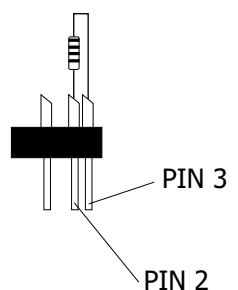

The DMX terminator is a male XLR 3-5 pins connector with a 120 ohm resistor

Between pin 2 and 3.

The DMX terminator must be plugged into the last unit (DMX out panel connector) of the DMX line.

PLACE A 120 OHM RESISTOR BETWEEN PIN 2 AND 3 OF A MALE XRL CONNECTOR AND PLUG IT INTO THE DMX OUT PANEL CONNECTOR OF THE LAST UNIT CONNECTED TO THE DMX LINE

The standard configuration of the XR9 is with XLR 5 pins connection.

To convert to an XLR 3 pins configuration proceed as follows:

- 1) Remove the 2 screws fixing the display cover panel to the unit (photo 1).
- 2) Remove the screws that fix the XLR connectors to the panel (photo 2).
- 3) Rotate the electronic card by 180° (photo 3).
- 4) Place the 3 pins XLR connectors in the special holes and close.

Photo 1

Photo 2

Photo 3

7.1-DMX Addresses

XR9 can be used in two different modes: 18 or 26 DMX (default) channels.

If you want to use the XR9 in 18 channels mode, select the 18 CH mode from the MODE menu and set the following addresses on the mixer:

Projector 1 A001

Projector 2 A019 If you want to select the next projector, just add "18"

Projector 3 A037

..... A....

projector 6 A091

If you want to use the XR9 in 26 channels mode, select the 26 CH mode from the MODE menu and set the following addresses:

Projector 1 A001

Projector 2 A027 If you want to select the next projector, just add "26"

Projector 3 A053

..... A....

Projector 6 A131

7.2-Selecting the DMX address

1) Press the UP-DOWN key until you reach the required DMX channel. The numbers on the display will start to flash (but the new DMX address hasn't yet been set).

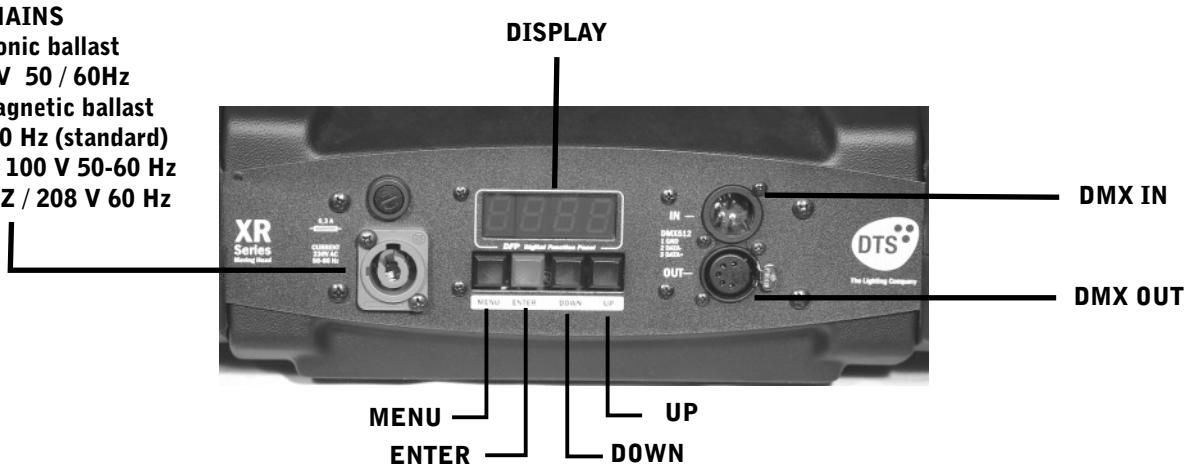

2) Press ENTER to confirm your selection. The numbers on the display will stop flashing and the projector is now setted to the new DMX address.

TRICKS:

if you keep pushed the UP or DOWN keys, the channels are calculated more quickly and you get a faster selection.

8- DISPLAY FUNCTIONS

MAINS
 Electronic ballast
 90-245V 50 / 60Hz
 Electromagnetic ballast
 230 V 50/60 Hz (standard)
 On request: 100 V 50-60 Hz
 120 V 60 Hz / 208 V 60 Hz

DISPLAY FUNCTIONS

The XR9 display panel shows all the available functions . Using these functions, it is possible to change some of the parameters and add some functions. Changing the DTS setting can vary the functions of the unit so that it does not respond to the DMX 512 used to control it. Carefully follow the instructions below before carrying out any variations or selections.

NOTE: the symbol shows which key has to be pushed to obtain the desired function.

10- PAN & TILT SPEED (SPEE) (default: 2)

You can set the PAN and TILT motors at high speed on your XR9.

Press menu until you see SPEE.

Press ENTER and select a speed with UP-DOWN (there are 4 speeds). Confirm by pressing ENTER.

When you use speed 4 (the highest) PAN and TILT speed is very high and your projector may loose its path. In this case, the encoder correct the position.

11- FAN SPEED (FANS)(default: 12)

Fan speed regulation makes it possible to reduce fan noise. However, the ambient temperature must be less than 35° C.

11- ERROR MESSAGES

13- OPENING THE PROJECTOR HOUSING

It is possible to inspect the inside of the projector by removing the cover as indicated below.

ATTENTION

REMOVE MAINS POWER PRIOR TO ACCESSING THE PROJECTOR'S INTERNAL COMPONENTS.

- 1) Loosen the 3 screws which fix the head covers (photo 1).
- 2) Once unscrewed, simply lift the covers to access the internal components (photo 2).

Photo 1

Photo 2

14- REPLACING GOBOS

XR9 uses a mechanical system which allows the fixture's gobos to be removed without the use of special tools. Replacement gobos should be made of either heat resistant glass or metal.

An ever-increasing range of gobos is available from your DTS sales network.

Gobo dimensions are as follows:

Ø external = 27.9 mm

Ø of image with defined edge = 24 mm

thickness = from 0.2 to 4 mm (see catalogue)

Replacing gobos on the rotating gobo wheel

When replacing gobos, ensure that the projector is switched off.

- 1) Open the projector housing as described above.
- 2) Remove the gobo holder to allow easier access to the gobo(photo 1 and 2).
- 3) Release the gobo retaining spring and carefully remove the gobo (photo 3).
- 4) Reverse the procedure to install a replacement gobo.

Photo 1

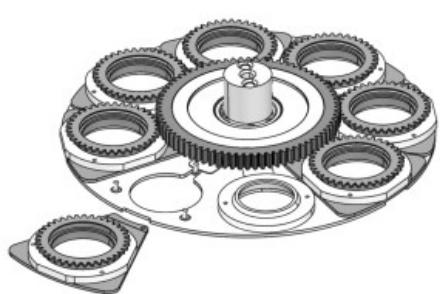

Photo 2

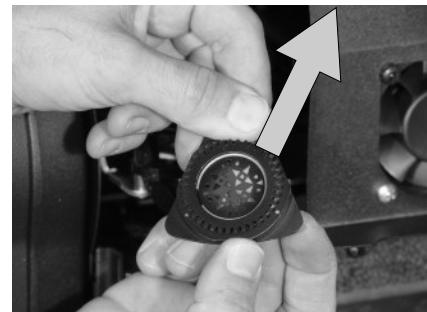

Photo 3

15- PERIODIC CLEANING

15.1- Lenses and reflectors

Even a fine layer of dust can reduce the luminous output substantially. Regularly clean all lenses and the reflector using a soft cotton cloth, dampened with a specialist lens cleaning solution.

15.2- Fans and air passages

The fans and air passages must be cleaned approximately every 6 weeks. This periodic cleaning will depend of course, on the conditions in which the projector is operating. Suitable instruments for performing this type of maintenance are a brush and a common vacuum cleaner or an air compressor. If necessary, clean the fans and air passages more frequently.

16- PERIODIC CONTROLS

Lamp

The lamp should be replaced if there is any visible damage or deformation due to heat. This will help to avoid the danger of the lamp exploding.

Mechanical parts

Periodically check all mechanical parts,gears, guides, belts, etc.for wear and tear, replacing them if necessary. Periodically check the lubrication of all components, particularly the parts subject to high temperatures. If necessary, lubricate with suitable lubricant, available from your D.T.S. distributor. Check the tension of the belts and adjust it if necessary.

Electrical components

Check all electrical components for correct earthing and proper connection of all connectors, refastening if necessary.

Fuse replacement

Locate the fuse, which protects the lamp and electronics, in the base of the XR9
Using a multimeter, test the condition of the fuse, replacing it with one of equivalent type if necessary.

Attention

Disconnect mains power prior to removing the projector housing.
